PROFILE

Frontend developer with 4+ years' commercial experience building React, TypeScript and JavaScript applications for product and consultancy teams, including SC-cleared public-sector programmes at Capgemini. I build interfaces that work from the keyboard and pass accessibility checks, connect them to REST APIs, and profile before I optimise: in my own apps that took a spreadsheet recalculation from 681 ms to 133 ms and a map render from 41.7 s to 0.39 s.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES2022+), HTML5, CSS3 (Grid, Flexbox, custom properties), Python
Frontend	React 19 (hooks, useReducer, useSyncExternalStore), Vite, npm workspaces, mobile-first layout
Web platform	Canvas 2D, SVG, WebGL, Web Workers, OffscreenCanvas, IndexedDB, Web Audio
Accessibility	WCAG 2.1 AA, WAI-ARIA patterns (grid, combobox, tabs), keyboard navigation, axe-core in CI
Performance	Chrome DevTools profiling, virtualised lists and grids, typed arrays, off-main-thread rendering
Testing & CI	Vitest, Playwright, fast-check, ESLint, Prettier, Git, GitHub Actions, GitLab CI/CD
Delivery	REST APIs, JSON, AWS, Azure, Agile/Scrum, technical discovery, stakeholder management

EXPERIENCE

Software Engineer · Capgemini — July 2022 – Present

- Build responsive front-end features in React, TypeScript and JavaScript with back-end engineers and designers.
- Integrate React applications with production services through REST APIs, cloud infrastructure and CI/CD pipelines.
- Maintain production web applications and their supporting Python services, keeping user-facing features reliable.
- Turn business and user requirements into solutions with senior stakeholders, from discovery to live support.
- Deliver for major public- and private-sector clients in Agile/Scrum teams, including SC-cleared programmes.

Web Developer · SynchrTrade — 2021 – 2022

- Built responsive web interfaces in React and JavaScript for commercial users, with back-end engineers and designers.
- Refined features in agile sprints as feedback and requirements changed, balancing usability and delivery speed.

SELECTED PROJECTS

Cells · a spreadsheet written from scratch · React, TypeScript, Vitest, Playwright — Live

- Formula engine from scratch: a Pratt parser, 116 Excel functions and a graph that recalculates only what changed.
- Virtualised ARIA grid of 1,048,576 rows with Excel's keyboard model, IndexedDB saving and live cross-tab editing.
- Profiled a 200,001-cell recalculation from 681 ms to 133 ms; 209 unit tests, including a property test against a reference evaluator, and 16 end-to-end tests with axe.

Your Place · print-ready map posters · React, TypeScript, Web Workers, OffscreenCanvas — Live

- Vector-tile decoder and renderer written from scratch, painting in a Web Worker so the map never waits on drawing.
- Profiling took the first poster from 41.7 s to 0.39 s; accessible combobox search in a shared component package.

Ember · an action game with no engine or asset files · Canvas 2D, Web Audio, Gamepad API — Live

- Real-time lighting from visibility polygons, generated maps and a score synthesised as you play.
- Tests play whole games with an autopilot and fail if any attack lands with less than 0.3 s of warning.

Portfolio · 12 projects, each live in the browser — Live

- A restaurant booking system, three on-device AI products and four developer tools; 1,000+ tests gate each deploy.

CERTIFICATIONS

AWS Certified Cloud Practitioner · Microsoft Azure AI Fundamentals (AI-900) · GitLab Certified

EDUCATION

BEng Mechanical Engineering · Aston University, Birmingham — 2021
